1) **Read the following passage and answer the questions.**

The function of education is to prepare young people to understand the whole process of life. The end of education is not merely to pass some examinations and get a job and earn one's livelihood. If education is to make people understand life, then surely life is not merely a job or an occupation, where life is something extraordinarily wide and profound, it is a great mystery, a vast realm in which we function as human beings. If we prepare ourselves only to earn a livelihood, we shall miss the whole point of life. Understanding life is much more important than getting a degree or passing an examination for a job. Life, with all its subtleties, is such a vast expanse. It has extraordinary beauty, sorrows, and joys. It also has hidden things in the mind, such as envy, ambitions, passions, fears, fulfilments, and anxieties. The birds, the flowers, the flourishing trees, the heavens, the stars, the rivers, and the fishes therein all this is life. When we are young, we must seek and find out what life is all about. Thus, we cultivate intelligence with the help of education. Intelligence is the capacity to think freely, without fear, without a formula, so that we begin to discover for ourselves what is real and what is true. Anyone who is gripped with fear will never be intelligent. Most of us have fear in one form or another. Where there is fear there is no intelligence. Thus, what education should do is help us understand the need for freedom. Unless we are free we will not understand the whole process of living. When we are free we have no fear. We do not imitate but we discover.

What is the effect of fear on humans?

- 1 We understand life's great mystery.
- 2 We are not able to develop our intelligence.
- 3 We think freely.
- 4 We see the vast expanse of life.
